

## Training course offers

Every day, again and again, your enterprise has got to proof its competitiveness - and your DBtron/L installation plays a crucial role to keep your enterprise efficient and competitive.

By choosing DBtron/L as your solution you have laid the best foundations.

**But each software can be only as good as its users.**

Inadequately skilled staff can not make full use of the capabilities of your DBtron/L solution. Consequently, the solution can not be used perfectly, bottlenecks in the process develop and productivity

fails your expectations.

Thorough training helps you avoiding such undesirable developments.

Experience has proven: Trained employees work professionally, are highly efficient and bring in new ideas and impulses into their enterprise. Costs and time invested into a compact, practice-oriented training pay off many times.

For your individual needs we have three different training concepts on offer.

<u><i>On-Site Concept</i></u>	<u><i>Remote-Training</i></u>	<u><i>Train-the-Trainer</i></u>
We train your personnel in using DBtron/L on our premises or elsewhere on your currently used system.	We train your personnel by the hour in using DBtron/L via TeamViewer and phone, thus saving you travel expenses.	We train your key users on your or our premises using your regular software.

### Advantages:

- reduced Total Costs
- faster Return on investment by faster implementation
- better Change-Management
- more competent human resources
- more satisfied staff
- optimal system configuration
- small load for your help desk
- minimized risks

*„\$1 spend on enterprise IT training affords an increase of the productivity of \$30 within three years. “*
